

(LF+HF) Dual Frequency RFID Desktop Reader

Features

- Non-driver USB mode, plug and play
- Support read-only EM4100 card
- Support read-only Mifare S50 and S70 card
- A buzzer and A LED indicator light
- Output data format optional (default 8H-10D)

RDM582 Dual-band card dispenser is a two-in-one card dispenser, can read LF 125KHz EM4100 card as well as HF 13.56MHz Mifare card.

USB adopts non-drive technology, plug in and play. It is just like data entry via a keyboard when dispensing cards, which greatly improves the speed of entering card data.

Application

- Access control
- Membership management
- Production process management

Parameter

Frequency	125KHz & 13.56MHz
Interface	USB (plug and play, keyboard simulation)
USB cable length	1.2 m
Operating Temperature	-10 °C ~ +70 °C

Test and run

- Once powered, red LED lights up and one beep, reader starts to work.
- When detecting a card, green LED lights up and one beep, indicating that the card number is successfully read, LED then turn red.
